

## FEL-PRO® TIMING CHAIN TENSIONER GASKET SET

### PROBLEM SOLVING INNOVATION

Fel-Pro Timing Chain Tensioner Gasket sets are designed for the repair environment.

The original tensioner for this application utilizes a sealing bead molded directly to the tensioner housing. For this repair, the OE recommends replacing the tensioner if the silicone bead is broken, even though the original tensioner may still be otherwise functional.

The Fel-Pro engineering team designed this new innovative Timing Chain Tensioner Gasket solution for this growing repair occasion, which allows you to install and re-seal the original tensioner.

The Fel-Pro Timing Chain Tensioner Gasket set (ES73226) is designed for **Ford 4.6L/5.4L V8 engines and 6.8L V10 engines from 2001-2014**. It comes complete with two (2) gaskets and two (2) installation aid tensioner clips, providing you with everything necessary to do the repair.

### KEY FEATURES

- 1 Sealing bead design developed specifically for the application, eliminating the need for RTV sealer.
- 2 Premium, proprietary rubber formulation withstands extreme temperatures and is compatible with today's engine oils.
- 3 Patent pending design.
- 4 Tensioner clips included to aid installation.
