# ML7,™ THE FP DIESEL® 7-LAYER HEAD GASKET THAT SEALS REBUILT ENGINES BETTER!

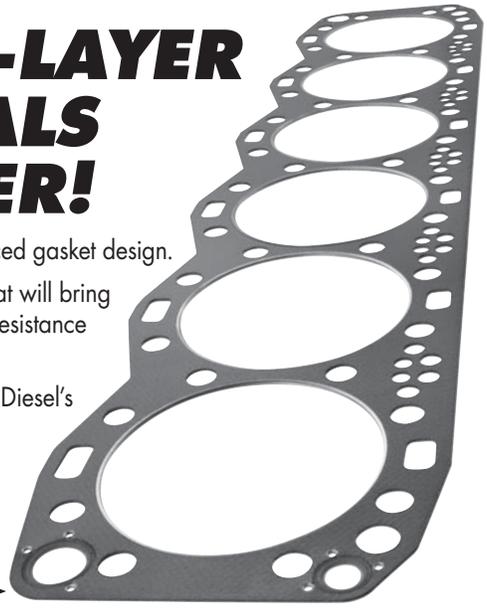

Sealing the most demanding area in a commercial engine – it takes today’s most advanced gasket design.

FP Diesel® has introduced a highly advanced multi-layer-core head gasket technology that will bring significantly enhanced combustion and fluid sealing capabilities as well as temperature resistance to a broad range of high-output commercial diesel engines: The ML7™ head gasket.

As commercial engine rebuilders look for the latest and best engine sealing solutions, FP Diesel’s ML7 gasket provides a new generation of head gaskets.

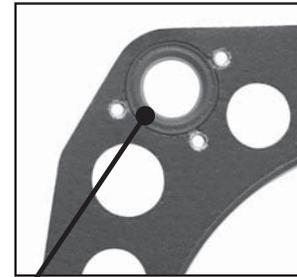

The key to the ML7 design is the reinforced gasket body which increases lateral stability and provides a rigid backbone to the combustion seal. The expanded graphite facing material is well suited to high-temperature operating environments, is impervious to chemicals, and remains conformable for unsurpassed fluid sealability.

ML7™ →

## LAYERS OF INNOVATION DELIVER COMPLETE PERFORMANCE

The ML7 gasket’s innovative design enables it to withstand significantly higher combustion pressures and temperatures as well as increased vertical and lateral motion between the engine block and cylinder head. Its steel core reinforcement helps ensure optimal compressed thickness control within each engine application. The thickness of the gasket body, armor and wire is engineered to achieve optimal load balance among the components and materials.

### FULLY ENCAPSULATED GROMMETS

Some gasket designs utilize grommets that are staked into place. But being fixed in place, they lack the flexibility to seat properly, leading to unwanted sealing issues. In some cases, they can fall out during assembly. By contrast, the ML7 gasket’s molded rubber grommets are eyeleted into the gasket body. They allow precise sealing bead location, accommodate casting movement, and enable trouble-free installation.

### KEVLAR®-REINFORCED COMPOSITE MATERIAL

Kevlar-reinforced composite material between the graphite facing material and perforated steel outer core forms a better bond between the perforated cores for unprecedented strength.

### 1/4 HARD (301 SS) STAINLESS STEEL COMBUSTION ARMOR

### PERFORATED OUTER STEEL CORES

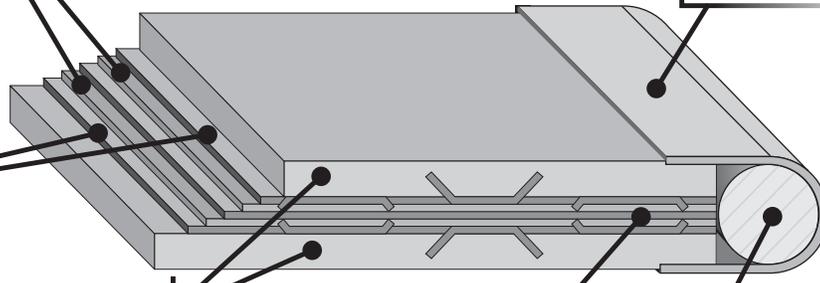

### EXPANDED GRAPHITE FACING WITH MOLY COATING AND SILICONE TOP COAT

The ML7’s resilient, conformable graphite facing provides excellent fluid sealability and low creep relaxation, and stands up to temperature extremes and corrosive chemicals. This graphite facing material utilizes a special moly coating developed specifically for the aftermarket service environment. This coating helps seal imperfections in the head and block mating surfaces and allows the gasket to adapt to lateral and vertical casting motion caused by combustion pressures and extreme operating temperatures. The special top coat provides no-stick release for future engine work.

### THICK, SOLID STEEL CORE

### LOW-CARBON STEEL WIRE RING

Copper flash-coated low-carbon steel (LCS) wire ring is the primary combustion seal and provides enhanced sealing stress around each combustion opening.

# FP Diesel CA0188 Engine Parts Catalog

*Global Technology Behind Every Part*

The new CA0188 Heavy Duty Engine Parts Catalog contains all of the components currently offered from FP Diesel for heavy and medium duty truck engines, agricultural and irrigation engines, industrial engines and marine engines not covered in the FP Diesel name-plate specific catalogs. FP Diesel offers separate replacement component catalogs for Caterpillar®, Cummins®, Detroit Diesel®, John Deere®, IH/Navistar®, Mack® and Komatsu engines.

Light duty engine components are available under the Sealed Power brand and can be found in Sealed Power SP1501 and SP1502 catalogs.

In addition to new FP Diesel part numbers included in this catalog you'll also find medium duty coverage previously available under Sealed Power that is now part of the FP Diesel offering. In cases where both a Sealed Power part number and FP Diesel part number were available for the same application, both part numbers will be listed in the catalog. As this coverage transitions to the FP Diesel product line offering, Sealed Power part numbers will be superseded to FP Diesel and only the FP Diesel number will be available for purchase.

## How To Use This Catalog

This catalog is designed to allow expedient identification of correct parts using the following information.

### The catalog is sorted as follows:

- 1st** by VEHICLE or ENGINE MANUFACTURER.
- 2nd** by ENGINE DISPLACEMENT.
- 3rd** by BORE DIAMETER. Engines with the same displacement are sorted by bore diameter.
- 4th** by USAGE. Engines used in Medium Duty Truck applications will be listed before engines used in Heavy Duty Truck applications.
- 5th** by VALVETRAIN CONFIGURATION. DOHC engines will be listed before SOHC engines.
- 6th** by INDUCTION SYSTEM. Naturally aspirated engines will be listed before Turbocharged engines.

Each engine header provides all the information necessary to select the desired engine. Many of the headers include serial number listings to provide absolute assurance that the correct listing is being used.

The pages within the applications are easy to read, and contain all the information required to select the correct part. Each listing will contain three distinct sections – Valvetrain, Block and Kits. The components in each section will always be listed in the following order:

Valvetrain	Block	Kits
Timing	Pistons	Re-ring Kits
Camshafts	Rings	In-Frame Kits
Lifters	Liners	Overhaul Kits
Cam Kits	Engine Bearings	
Push Rods	Oil Pumps	
Rocker Parts	Oil Coolers	
Valves	After-Coolers	
Valve Guides	Gaskets	
Valve Springs	Freeze Plugs	
Valve Seals	Seals	
Valve Seats	Redi-Sleeves	
Valve Misc.		

## FP Diesel Philosophy

**Global Technology Behind Every Part**

FP Diesel – part of the Federal-Mogul Engine Systems group – is the industry's leading brand of premium heavy-duty replacement engine parts and gaskets, providing total engine system solutions for such well-known brands as Case®, Caterpillar®, Cummins®, Detroit Diesel®, IH/Navistar®, John Deere®, Komatsu®, Mack®, Waukesha® and White Superior®.

Federal-Mogul maintains a steadfast commitment to unsurpassed product quality and customer service. We serve construction, marine, agricultural, mining, gas compression, trucking and industrial markets around the globe. As the global leader in heavy-duty powertrain systems, Federal-Mogul is instrumental in the development of every new generation of gasoline and diesel engine technology. When you choose FP Diesel, you get unparalleled global engineering and manufacturing resources built into every product.

Today's medium and heavy duty commercial markets demand performance. Performance means precision-engineered parts that meet your demanding specifications; and are backed by a team of knowledgeable customer service representatives who can provide technical information and assistance; computerized order and inventory tracking for fast and accurate order fill; unprecedented warranty programs and a company-wide commitment to customer satisfaction.

## Manufacturing

### *Global Technology Behind Every Part*

Precise manufacturing and fabricating techniques, rigorous quality control procedures, utilization of the latest CAD technology and innovative solutions to industry challenges – coupled with Federal-Mogul's global manufacturing capabilities – have established FP Diesel as the industry leader in the medium and heavy duty commercial market.

FP Diesel applies stringent quality control procedures with expertly skilled technicians supervising the manufacturing process in all phases to ensure that our parts will perform and last.

FP Diesel is a military approved supplier for the 53 Series Detroit Diesel engine. But the parts we supply for the 53 aren't the only ones that go through government testing. Every FP Diesel part must pass through high-level quality control. Plus, every part is tracked throughout the entire distribution process.

## Customer Service

FP Diesel customer service representatives are among the most experienced and knowledgeable in the industry, with hands-on medium and heavy-duty experience and in-depth knowledge of engine parts and applications. With one call to your

representative you'll have answers to any product, technical, order processing, billing, warranty, pricing, order tracking or availability questions you may have. Customer service that goes the extra mile also means you not only get the parts you need, but expert assistance from a person who knows the market.

Plus, our computerized inventory system allows us to ship orders promptly anywhere in the world, while our easy-to-use cataloging system makes ordering FP Diesel parts fast and simple. For the parts and information you need, count on FP Diesel to go the extra mile.

## Coverage

### Global Technology Behind Every Part

The FP Diesel product offering is a comprehensive line of diesel and natural gas engine replacement parts that provides all the coverage necessary to meet your heavy-duty engine rebuilding needs. FP Diesel also offers a full line of gaskets and elastomeric products. For more specific information, please refer to our full-line catalogs, which are engine and machine specific and follow OEM format. To ensure exact part number replacement, these catalogs reference OEM part numbers and features technical information relating to the specific engine being serviced.

## Products and Catalogs

### Caterpillar

Replacement Caterpillar products cover 3200, 3300, 3400, 3500, D Series and G Series engines. This coverage extends from cylinder heads, fuel injection, cam and crankshafts, cylinder kits, valvetrain and electrical to engine bearings, transmission, hydraulic gasket sets and more. **Refer to FP Diesel catalog No. CA0010 (parts) and CA0020 (gaskets).**

### Cummins

FP Diesel provides replacement parts coverage for V378, V504, V555, Small Vee Engines, V/VT 903, 855 Series, N14, L10, B Series, C Series, V/VT1710, N743 and K/KTA 18-, 38- and 50-liter engines, as well as components for Jacobs® brakes. **Refer to FP Diesel catalog No. CA0030.**

### Detroit Diesel

FP Diesel offers the most complete coverage in the replacement parts industry for Detroit Diesel, with an extensive line of components and kits for the 8.2-liter, 53 Series, 60 Series, 71 Series, 92 Series and 149 Series engines. **Refer to FP Diesel catalog No. CA0040 for 2-cycle engines or FP Diesel catalog No. CA0045 for 4-cycle engines.**

### John Deere

FP Diesel offers a broad range of in-frame and complete overhaul kits and related components for 300 Series, 400 Series, 500 Series and Powertech engines is available from FP Diesel. **Refer to FP Diesel catalog No. CA0085.**

### Komatsu

Extensive coverage for Komatsu S6D155 and SA6D155 engines, as well as a full line of replacement parts for Komatsu machines using Cummins

N743, KT/KTA 19-, 38- and 50-liter engines, and the Cummins 855. **Refer to FP Diesel catalog No. CA0085.**

### Mack

FP Diesel has a broad line for Mack, early ENDT 675 and 676 engines, as well as parts for later EM6 with both two- and four-valve head configurations. **Refer to FP Diesel catalog No. CA0060.**

### International/Navistar

International coverage extends from the 6.9 and 7.3 liter, DT-360 and DT-466 through the 9.0 liter engine. **Refer to FP Diesel catalog No. CA0050.** For agricultural applications, FP Diesel also services the DT-414 and DT-436 Case/I.H. engines. **For industrial and agricultural applications, refer to FP Diesel catalog No. CA0188.**

### Case

FP Diesel has a complete range of kits and components for the 188, 207, 301, 366, 451 and 504-Case engines along with the 4-390 & 4T-390, 6-590 & 6T-590, 6T-830 & 6TA-830, LTA 10 and NTA 855 B/C III Cummins engines. **Refer to FP Diesel catalog No. CA0095.**

### Commercial, Ag, Industrial Engines

The FP Diesel CA0188 catalog includes all the engine manufacturers not covered in the FP Diesel name-plate specific catalogs. Replacement engine components for Allis-Chalmers, Bedford, Bendix-Westinghouse, Briggs & Stratton, Buda, Case Tractor, Chevrolet MD Truck, Climax, Continental, Dodge MD Truck, Ford Tractor, GMC MD Truck, Hercules, IHC Tractor, Isuzu Forklift, KHD, Kohler, LeRoi, Massey Ferguson, Mercedes, Mazda Forklift, Minneapolis-Moline, Mitsubishi, Novo, Oliver, Perkins, Superior, Thermo-King, Volvo, Waukesha, White and Wisconsin are included in the **FP Diesel CA0188 catalog.**

## Engine Kits

*Global Technology Behind Every Part*

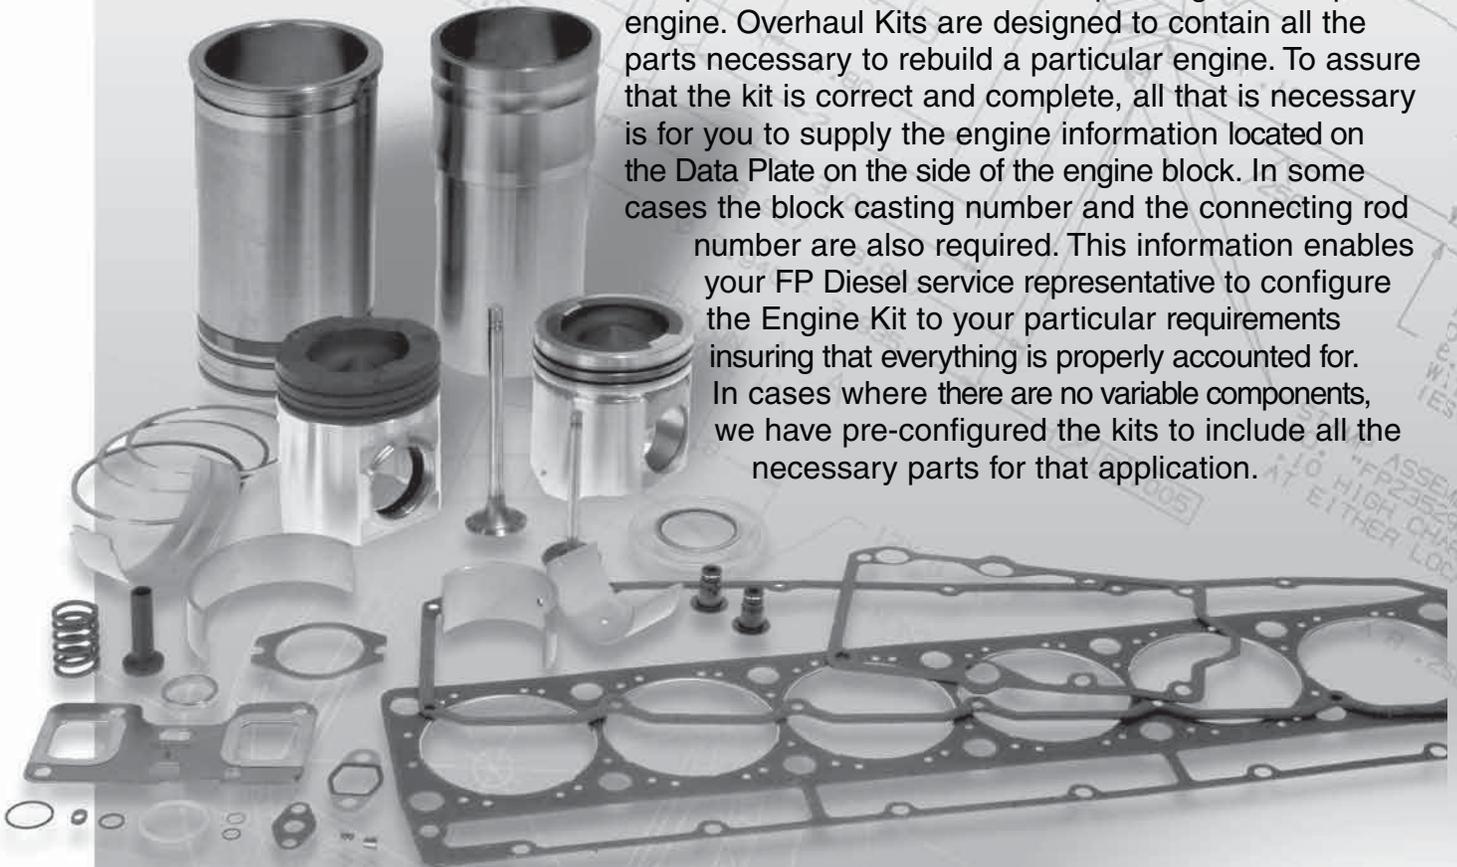

The FP Diesel Engine Kit program allows you to select a kit tailored to the job at hand. Whether performing a complete overhaul, or in-frame repair, FP Diesel engine kits contain all the necessary components to complete the rebuild job. This comprehensive program provides you with the following:

- Concise application information
- One price look-up
- A full complement of oversizes and undersizes
- Master kits that include full gasket sets

Engine kits are listed at the back of this catalog and under the In-Frame and Overhaul specific sections.

### How To Specify FP Diesel Engine Kits

Many FP Diesel engine kits have several variations in components that are available depending on the specific engine. Overhaul Kits are designed to contain all the parts necessary to rebuild a particular engine. To assure that the kit is correct and complete, all that is necessary is for you to supply the engine information located on the Data Plate on the side of the engine block. In some cases the block casting number and the connecting rod number are also required. This information enables your FP Diesel service representative to configure the Engine Kit to your particular requirements insuring that everything is properly accounted for. In cases where there are no variable components, we have pre-configured the kits to include all the necessary parts for that application.

# Engine Bearings

Global Technology Behind Every Part

## Engine Bearing Material Selection

When selecting engine bearings, most rebuilders concentrate on getting the proper clearances and maintaining adequate oil pressure. Durability is expected from any bearing chosen, and the advantages of different bearing materials may not be considered. If engine operating conditions are considered and bearing materials chosen accordingly, the likelihood of engine longevity is greater. No single material can be correct for every application. FP Diesel engine bearings are equal to or better than the original equipment specifications

### Bi-Metal Aluminum Alloys Plated and Unplated

Diesel fuels, moisture, and engine "blow-by" introduce many contaminants into the crankcase. Aluminum engine bearing materials provide outstanding resistance to the corrosive effects of these substances, and are the product of choice for most current original equipment vehicle manufacturers. The modern bi-metal aluminum engine bearing contains silicon.

As a result of using silicon, the alloy resists seizure and dramatically reduces or eliminates bearing wear. This contributes to today's extended engine life. Aluminum is often the best material for a daily driven vehicle. Adding an overplate to an aluminum engine bearing will further enhance embedability and conformability. Continued efforts to remove lead from our environment guarantee that aluminum will become the preferred engine bearing material for most applications.

for material and design. We also provide alternatives to address unique problems and special needs.

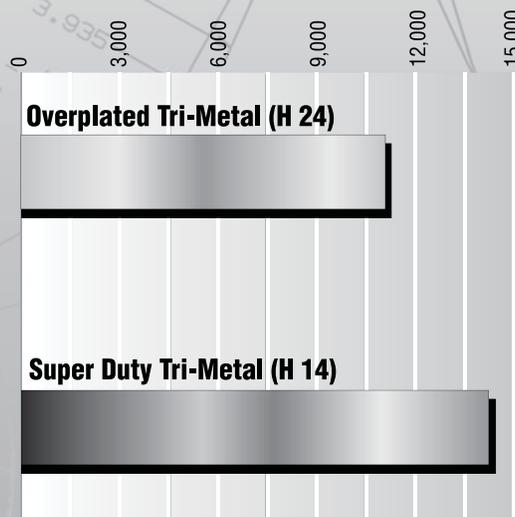

In heavy duty applications there are a number of materials that will do an excellent job. Each alloy has advantages in terms of resistance to corrosion, rate of wear and fatigue strength. The latter characteristic is critical in engines that operate under high loads, generate considerable heat and may be subjected to occasional detonation.

### Tri-Metal Alloys

Tri-Metal engine bearings, such as our H-14 and H-24 alloys, have excellent fatigue resistance, but are less resistant to corrosion damage than aluminum bearings. These bearing materials are accepted by engine builders worldwide, and are proven to be reliable in a wide range of uses. While OE manufacturers are moving to aluminum for their needs, many rebuilders still specify the tri-metal bearings for older engines.

## PLASTIGAGE

**A Quick and Accurate Method  
for Measuring Main and  
Connecting Rod Bearing Clearances.**

Federal-Mogul offers Sealed Power Plastigage. It ends the guessing game when measuring clearances of main and connecting rod bearings. Specially formulated and oil soluble, Plastigage strips flatten precisely for accurate reading. Plastigage strips are available in four size ranges, packaged 12 to a carton, (enough to do 12 engines). Part number SPG-1 cartons contain strips in the .001-.003 inch range. Part number SPR-1 cartons hold strips in the .002-.006 inch range. SPB-1 cartons include strips in the .004-.009 inch range. SPY-1 cartons contain strips in the .009-.020 inch range. This complete range of sizes will fit every heavy duty engine.

- SPG-1 .001-.003 in.
- SPR-1 .002-.006 in.
- SPB-1 .004-.009 in.
- SPY-1 .009-.020 in.

## Heavy Duty Pistons

*Global Technology Behind Every Part*

FP Diesel heavy duty pistons are designed and produced for severe operating conditions. Federal-Mogul is one of the world's leading manufacturers of heavy duty pistons offering one and two-piece designs including aluminum articulated, cast iron and steel materials. For severe and high load applications, FP Diesel pistons include a metallurgically bonded NI-resist insert in the top and in some cases, the second ring groove. The NI-resist insert minimizes groove wear and reduces pound-out from the compression ring. Anodized heads

and graphite-coated skirts offer additional durability in severe applications. Federal-Mogul also utilizes an in-house, patented magnesium-phosphate coating to reduce the piston corrosion caused by high-sulfate diesel fuels and break-in wear on problematic applications.

We design our heavy duty pistons using the latest in computer aided design (CAD) software. Each application is thoroughly researched to ensure the proper dimensional and metallurgical requirements. And since we also design and manufacture cylinder liners and piston rings, our engineers can make sure each piston we develop provides optimum performance as part of the "power-cylinder" system.

## Medium Duty Pistons

*Global Technology Behind Every Part*

### **DUROSHIELD® Pistons**

A growing number of our pistons are available with our exclusive factory-applied graphite anti-friction coating. This patented technological advance can extend the life of an engine and essentially eliminate piston scuffing problems. Coated pistons are ideal for severe duty performance engines and everyday applications. The coating is precisely applied to pistons with a computer-controlled application and unique curing process. There is no overspray with our process and no coating ends up in the ring grooves.

#### **DUROSHIELD Pistons:**

- Improve piston life
- Reduce friction
- Essentially eliminate scuffing and wear
- Help prevent damage from inadequate lubrication, especially during start-up
- Improve cylinder sealing for less blow-by and more power
- Require no increase in skirt clearance

## Sleeves and Assemblies

*Global Technology Behind Every Part*

Cylinder sleeves are produced by Federal-Mogul in a QS9000 registered facility complete with casting, induction hardening, machining, measurement and design capabilities. We start with raw castings produced on a state-of-the-art molding line

specifically designed for the manufacture of static cast cylinder liners. The static castings produced by our foundry have a very consistent microstructure and superior scuffing resistance.

Certain applications are induction hardened or thru-hardened to enhance the wear characteristics and strength of the liner. Hardened liners are typically used in engines highly susceptible to dirt contamination, such as construction or agricultural applications.

Machining is performed on modern CNC equipment to ensure dimensional stability and exacting tolerances. Cylinder liners are typically finish honed to generate a plateau finish. The plateau finish promotes rapid ring seating during break-in while providing a long-wearing sealing surface.

FP Diesel offers sleeves for wet, dry and repair applications. Sleeve assemblies or kits include the sleeve, piston, piston pin and lock rings, piston rings and sealing rings.

## Piston Rings

*Global Technology Behind Every Part*

FP Diesel offers a broad range of piston rings that dominate the industry with technically advanced design, dedicated research and superior quality. Our rings minimize cylinder leakage under true operating conditions, and provide maximum oil control.

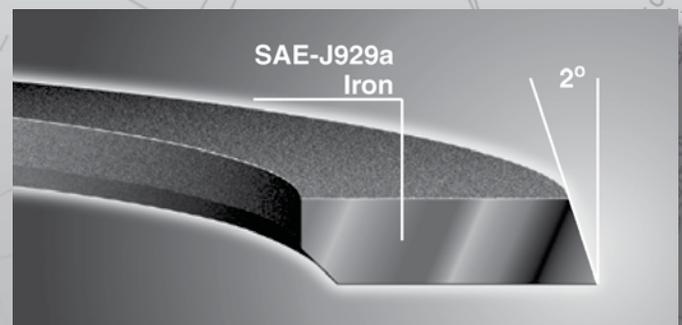

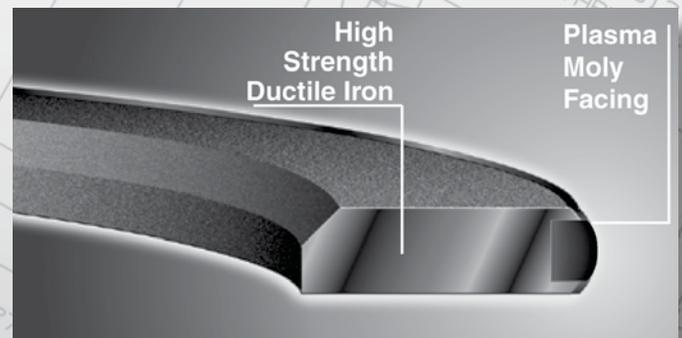

### Top Ring

FP Diesel top rings provide reliable compression sealing and maximum power output, and control "blow-by." They are engineered for instant seating, superior cylinder sealing and optimum durability. We offer cast iron, high strength ductile iron, and steel material choices. All premium ring sets feature moly, chrome or plasma-moly facings for enhanced performance under demanding conditions. The inherent strength of our materials provides sealing integrity at extreme pressures and RPM. We supply rings for all popular applications: including medium and heavy duty, agricultural and high performance.

### Second Ring

Second rings are manufactured from SAE-J929a iron to provide excellent durability and superior oil control. The primary function of the second ring is oil control. Our tapered face design makes this ring work as a "scraper," reducing the potential for oil migration into the combustion chamber.

The race-proven gap design creates an escape path for residual combustion gases, reducing inter-ring pressure and keeping the top ring seated against its groove. Without this escape path, trapped pressure will unseat the top ring, causing ring flutter and reduced cylinder seating at high RPM. Our one-piece second rings are far more effective and reliable than competitive designs which attempt to retain combustion pressure lost through ineffective top rings. Beware: cylinder leakage tests are steady-state; they do not account for time, piston movement or true operating pressures.

## Medium and Heavy Duty Timing Components

*Global Technology Behind Every Part*

FP Diesel offers comprehensive coverage for every component from timing belts to complete kits.

### Timing Sprockets

Cam and crank sprockets are manufactured to mesh precisely with the chain for efficient, quiet operation. Cam sprockets are powder metal, sintered metal or special nylon on aluminum. Crank sprockets are powder metal, steel or sintered metal. Both are heat-treated and manufactured for optimum performance and long life in a wide variety of applications.

### Timing Chains

Timing chains are constructed from links of selected alloy steel, connected by large pins for maximum durability. Careful dynamometer testing assures you of the highest quality and dependable, long-life performance. Each chain is dipped in lubricating solution to ensure a rust-free shelf life. Chains are also pre-stressed to ensure proper fit.

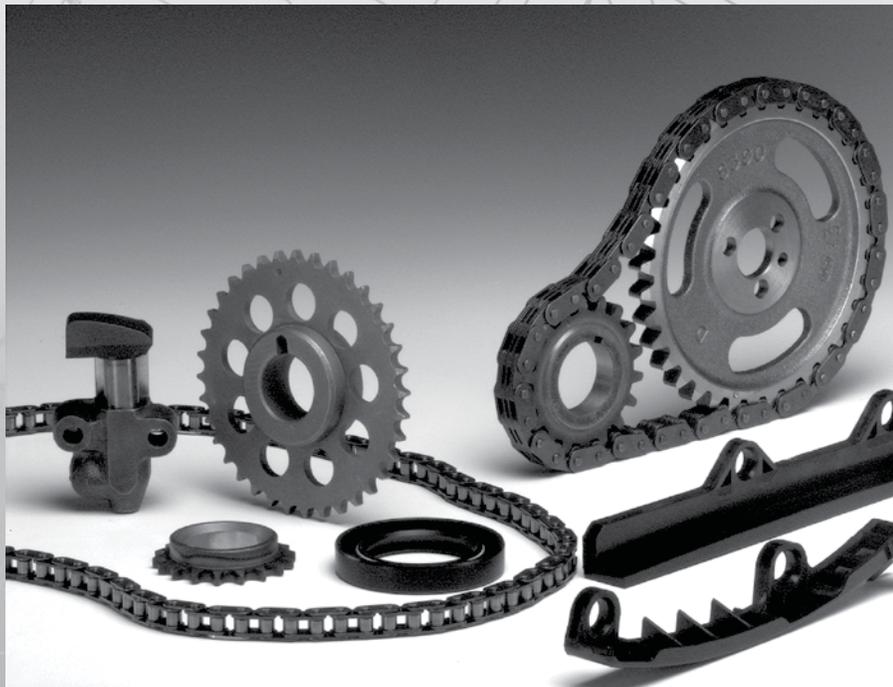

Note: Always replace timing sprockets and chains or timing gears as complete sets – never one at a time – because the wear patterns that led to one component's failure will prematurely wear its replacement.

### Timing Gears

Timing gears are available in aluminum, ductile, cast iron, 1144 steel and laminated fiber. Crown shaving of gear teeth equalizes heavy loads across the teeth and also accommodates minute shaft misalignments. All gears are heat-treated for durability.

### Timing Component Kits

Timing sets are available for import and domestic applications. Three-piece (KT3-) and multiple-piece (KT-10) sets are available. All the parts you need for the repair are listed under one part number.

## Camshafts

*Global Technology Behind Every Part*

Valve actuation is key to top engine performance. That's why the camshaft is one of the most critical components to check in any engine overhaul.

The camshaft controls valve timing and lift, providing input to the distributor, oil pump and fuel pump. Specifying the correct replacement camshaft is crucial in restoring OE performance after an overhaul.

FP Diesel camshafts are manufactured from carefully selected materials for compatibility with today's engines and valvetrains. Materials utilized include chilled cast, hardenable gray iron, ductile iron, forgings and steel. Our assembled camshafts feature composite materials.

Camshaft lobes are ground from one-piece masters, ensuring correct timing and elimination of indexing errors in camshaft profile. Carefully controlled shaft hardening provides long-wearing surfaces designed to mate with the engine's lifters or followers.

Our camshafts are precision ground to duplicate OE performance and emission specifications.

Produced for superior engine performance and smooth, quiet operation meeting the requirements of engine rebuilders worldwide.

## Oil Pumps

Oil pumps and components are manufactured to meet or exceed the challenges of the repair environment. Every pump is flow- and pressure-tested with oil to ensure the quality you've come to rely on.

## Medium Duty Lifters

*Global Technology Behind Every Part*

Valve lifters follow the contour of the camshaft, changing the rotary motion of the camshaft into the linear motion necessary to open and close an engine's intake and exhaust valves. Its primary function is to maintain precise valve timing under all engine operating conditions.

Lifters are manufactured to exacting tolerances. The internal components are machined and gauged to 33 millionths of an inch (.000033"). Components are indexed and matched to ensure efficient performance and quiet operation.

Lifters feature a flat disc check valve. Lighter and more accurately machined, it provides faster and more effective metering. Face hardness is monitored through Rockwell hardness testing to ensure all lifters provide maximum service life.

Lash adjusters are designed to eliminate excess valvetrain clearance for overhead cam engine designs.

**There are five basic configurations of lifters:**

- **Mechanical flat** – a hardened iron, solid tappet requiring periodic adjustment
- **Mechanical roller** – features steel rollers on the tappet to reduce friction
- **Hydraulic flat** – a hydraulic cylinder

which utilizes engine oil to provide a quiet, maintenance-free valvetrain. In more modern engines an oil-metering system is incorporated in the lifter as a means of supplying a precisely metered amount of oil to the wear points in the valvetrain

- **Hydraulic roller** – combines technological features of hydraulic and roller, developed to reduce friction and increase fuel economy
- **Hydraulic lash adjuster** – provides lash adjustment in overhead camshaft engines

## Medium & Heavy Duty Valves and Valvetrain

FP Diesel valves and valvetrain components are designed to address the challenges encountered in repaired engines. We offer a complete line of valvetrain parts for medium and heavy duty engines.

### Valves

We offer a wide selection of valves for hundreds of applications. FP Diesel valves are precision manufactured from alloys that provide excellent corrosion resistance, fatigue strength and heat resistance.

High-alloy steel construction gives our conventional valves excellent corrosion and heat resistance plus positive sealing. Special coatings protect heads from scale buildup, guttering and preignition. Stellite facings protect against valve "burning." Valve stems are chrome-plated for wear resistance. We also offer valve assemblies and valve kits.

Oversized valves are offered for many applications. The oversize valve is the best way to repair cylinder heads having guide bores which are not excessively worn.

## Medium and Heavy Duty Valves and Valvetrain

*Global Technology Behind Every Part*

### Valves (continued)

Machining time and expense is less than required with other methods and the repair is more durable. Use of oversize stem valves eliminates installation of sleeves or guides, which act as barriers to the transfer of heat to the cooling system. The valves will run cooler and last longer.

Sodium-filled valves offer long service life because the sodium drains excess heat away from the valve head. Valves are filled with a sodium-mercury combination for maximum resistance to excessive engine temperatures.

When used with rotocaps, our valves become self-cleaning to provide superior resistance to hot spot buildup, burning, guttering and sticking. Each time the valve opens it rotates to wipe the face clean. Positive seating, high dependability and easy installation combine to provide a long, low-cost service life in demanding applications.

### Valve Springs

Our valve springs are manufactured from high-quality spring steels and are tested for correct tension. All springs are required to meet stringent dimensional and uniformity requirements to ensure trouble-free performance. We offer single springs, springs with dampers and spring assemblies.

### Valve Spring Inserts

Valve spring inserts help restore springs to the proper height to assure normal spring pressure. Grinding the valves and re-facing the valve seat can remove enough material to cause the assembled height of the valve spring to increase and be out of specification. This leads to a reduction in the valve spring pressure and reduced engine performance. The correct insert installed under each valve spring will help restore springs to the proper height, assuring normal valve spring pressure and optimum engine performance. Three insert designs are available for nearly every application.

#### Part number suffixes:

**A = Type A .060 Thick – Copper color, for springs in service**

**B = Type B .030 Thick – Silver color, for new springs**

**C = Type C .015 Thick – Black color, for balancing**

### Valve Guides

FP Diesel offers premium valve guides made from an upgraded material of gray iron with high phosphorous content, which gives high wear resistance and improved running properties in poorly lubricated conditions.

Hardness and the ability to retain oil in the phosphorous cavities make these valve guides ideal for use in most gasoline truck engines. Performance guides are manufactured from bronze material.

In heavy duty applications, chrome is added for increased hardness. This material is ideal for highly stressed engines with aggressive combustion.

We have replacement valve guides for a wide range of applications. We offer replacement (standard and oversizes), conversion, threaded and bronze valve guides, precision-

machined for a perfect fit. Inside diameter finishes are engineered for valve stem compatibility.

Conversion guides are also available in threaded I.D. (for additional lubrication) and non-threaded styles. Long-wearing iron and bronze alloys allow our conversion guides to give new life to heads with worn guide bores.

### Valve Seats

The function of the valve seat is to seal the combustion chamber at the valve opening so that gases cannot escape during compression, ignition and combustion.

We offer precision-machined intake and exhaust valve seats made from hardened alloy material. The standard material is a hard, high-chrome content. These seats provide excellent performance and wear characteristics in all gasoline and diesel engines.

### Valve Stem Seals

Our designs include positive seals specially designed for superior sealing and excellent heat resistance on both intake and exhaust valves.

Valve stem seals eliminate excessive oil consumption and are a perfect match with our valves. We offer two types of seals: the umbrella type, which is not pressed to the guide, and the positive type, which is pressed onto the guide. Positive valve stem seals feature premium materials, often with bonded inserts which are superior for preventing oil consumption.

### Valve Keepers

Valve keepers (locks) are mounted in the retainer or valve spring cap to keep the valve stem in the proper position. When a head is disassembled, attention should be paid to the valve locks. A thorough inspection should be made for wear on the lock beads and outside diameters.

Worn parts should be replaced. As a precautionary measure, it is advisable to replace all the locks. If an unworn lock is inadvertently mated with a worn lock, the retaining cap may shift, resulting in valve tip breakage.

### Rocker Arms and Assemblies

Rocker arms and assemblies are part of the engine valvetrain. The rocker arm accepts movement from the camshaft through the push rod. The rocker arm pivots on the fulcrum (or ball) and opens the valve. Another type of rocker arm is the cam follower. The rocker arm pad actually rides on the cam lobe and opens the valve as it pivots on a lash adjuster.

Our rocker arms are available in a variety of configurations and materials ranging from stamped steel individual rockers to cast cam followers. Each rocker arm is manufactured to meet the operating environment of the engine. Push rod seats, pivot areas and contact pads are all hardened for long service life and optimum compatibility with associated components.

Rocker arms are ground and hardened at the pad areas to ensure wear resistance and proper contact. This minimizes side loads on valve stems.

## Medium and Heavy Duty Wear Sleeves

*Global Technology Behind Every Part*

### Rocker Arm Shafts

Rocker arm shafts and assemblies are also part of the valvetrain. This type of design is known as a shaft rocker arm. The rocker arms are positioned on a shaft suspended above the head. Spacers or springs are used to correctly locate the arms on the shaft so they line up with the valves and push rods.

Rocker arm shafts are manufactured from premium quality steel. Induction heat treating hardens the shaft surface at critical wear points while maintaining the full tensile strength of the inner core.

### Push Rods

The push rod is part of the engine valvetrain. Its function is to transfer the upward motion of the valve lifter and pivot the rocker arm, which in turn opens the valve. In many applications the push rod is hollow and

lubricant is pumped through the rod to lubricate the upper valvetrain.

The ends of the push rod are usually spherical in shape. In some cases, a ball is welded in place on the end of the shaft. The spherical ends fit into sockets in the valve lifter and the rocker arm. In the case where mechanical lifters are used, there is a socket at one end of the push rod, which connects with the ball on the rocker arm adjusting screw.

Our push rods are manufactured from high-strength tubular steel and feature special wear- and corrosion-resistant surfaces. They provide extra toughness where needed most.

The tips are hardened for long life and compatibility with mating components. Many push rods for engines with non-adjustable valvetrains are offered in over- and under-sizes.

## National® Redi-Sleeves®

Redi-Sleeves are precision stainless steel wear sleeves designed to be pressed on a shaft where seal wear such as tracks or grooves is evident.

Redi-Sleeves provide fast, inexpensive repairs for grooved shafts from ½" (12.7 mm) to 8" (203 mm) diameter. Redi-Sleeves combine stainless steel construction with 0.010" (0.25 mm) wall

thickness. The thin construction of the sleeves allows the original seal size to be used with minimal additional lip loading.

The surface provided by the Redi-Sleeves is the best possible sealing surface, ground to a 10-20 micro inch Ra (.25 -.50 Micrometer Ra) finish without lead.

The stainless material offers a corrosion-free sealing surface that surpasses most original shaft finishes and materials.

Redi-Sleeves are easily pressed onto a shaft via a removable flange to provide a new seal running surface. An installation tool designed to work with the flange is provided with each Redi-Sleeve.

Supplementing our excellent stock of Redi-Sleeves, special non-stock or made-to-order Redi-Sleeves are also available.

*For more information regarding Redi-Sleeves selection, installation and removal, please refer to the National #415 catalog.*

# FP Diesel Temperature Recorder

Global Technology Behind Every Part

## Temperature Recorder

*Helps protect you from warranty claims due to overheated engines.*

*FP Diesel Temperature Recorders are heat tabs that provide an instant, accurate and positive determination of whether a rebuilt engine has overheated beyond normal operating temperatures. Possibly voiding a warranty.*

- Graduated positions cover marine, diesel and gas applications.
- Self adhesive temp recorder permanently records overheating
- Grey indicators turn permanently black when temperature points are reached.
- Pressure sensitive adhesive backing rated to 500 degrees F. (260 Celsius) on smooth clean dry surfaces
- Indicator response time is less than one second
- Color change accuracy: + or - 1% of indicated value.
- Resistant to solvents, fuels, grease, oil, water and steam

FP Diesel Temperature Recorder  
Part No. FP4956  
Sold 5 per box

*Three black dots indicate the recommended operating temperature for a diesel application has been exceeded.*

It is recommended that the FP Diesel temperature recorder, Part No. FP4956, be installed on a new, clean freeze plug in order to insure a smooth surface and proper adhesion. This location, due to its temperature sensitivity assures that overheating is recorded as soon as it occurs. Temperature recorders can also be applied directly to the end of the head(s) and / or on the block.
